

Digital Audio Distribution

CDS-VAN is a fully digital system, which gives you the opportunity to create your conference circuit as flexible as possible.

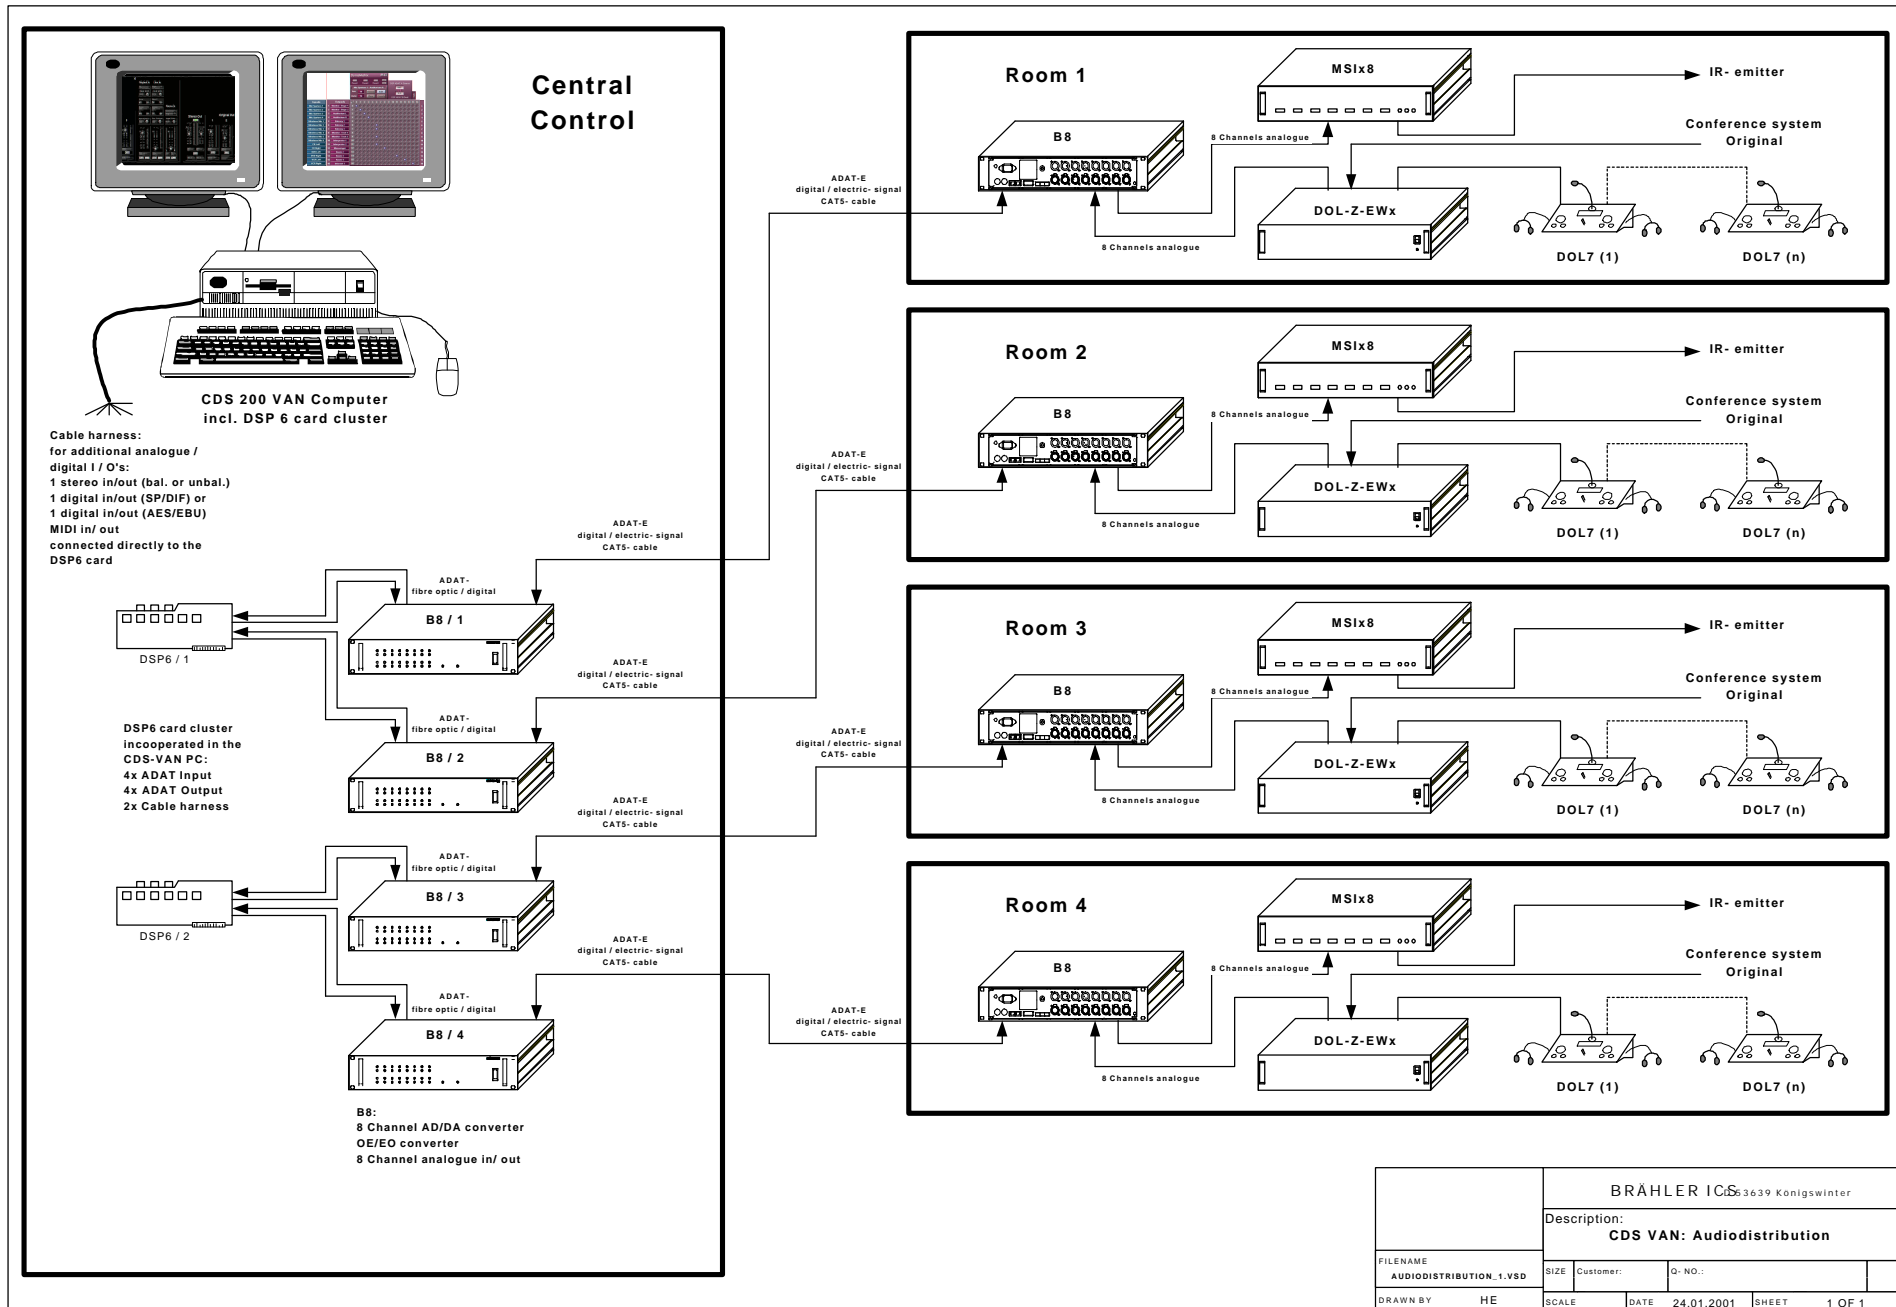

This bloc scheme gives you an overview of a digital audio distribution system with a high quality standard (CD-Quality), using the CDS-VAN system and the B8 AD/DA interface.

Within this system it is possible to distribute the incoming signals from a conference room to another and vice versa.

All 4 rooms are controlled from one single host, using CDS-VAN- technology.
