

CDSVAN

Digital Chairman's Unit PV9

BRÄHLER ICS is committed to continually improving its products and so reserves the right to make technical modifications without notice.

Description

The digital chairman's unit PV9 serves within the CDSVAN conference system as microphone unit and for the transmission of up to 32 languages. Furthermore votings and evaluations are possible with 5 illuminated keys.

Password protected Chipcards make personal identification for e.g. name administration and lists of speakers possible.

With the "Mute all" key the chairman of the meeting can mute all active microphones independently of the microphone mode for the duration of depressing the key.

The black/silver housing consists of impact resistant plastic and has a "silver" anodized aluminum control panel. If desired, the housing upper part and the control panel can be supplied in other colours. So it is relatively simply possible to give to the equipment your personal note, or adapt it to your Interior. Further inscription variants are possible in all languages up to touch typing.

A shielded CAT5 connection cable (2m) is included in delivery.

Technical Data

Complies with international standard IEC60914
